

HRSA's HIV/AIDS Bureau (HAB) Ending the HIV Epidemic in the U.S. (EHE) Initiative Data, 2023

CLIENTS SERVED IN EHE JURISDICTIONS

In 2023, HAB EHE-funded providers served:

26,830

clients new to care

17,358

clients re-engaged in care¹

Because 87% of all new HIV transmissions come from people who are not aware they have HIV or who are not receiving any HIV care,² this represents a significant contribution toward ending the HIV epidemic in the United States.

HAB EHE-funded providers leveraged their EHE funding to

Deliver rapid antiretroviral therapy services.

Expand access to services, including housing, transportation, telehealth, mobile medical units, and extended hours/days of operation.

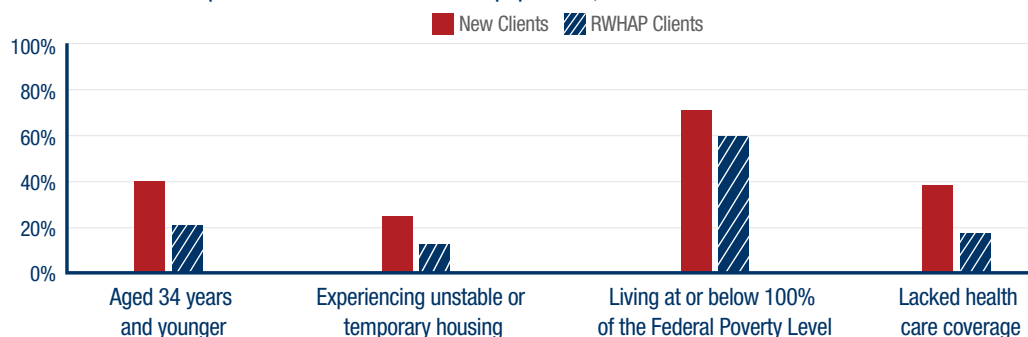

Support client navigation through community health workers and peer support.

Develop the HIV workforce and enhance partnerships.

Among Clients New to Care in 2023

Compared with the overall RWHAP population,³ more clients new to care were:

By the end of 2023, **81.4%** of patients who were new to care and receiving HIV treatment **reached viral suppression,*** which means they cannot sexually transmit HIV and can live healthier lives.

EHE-FUNDED HIV WORKFORCE TRAININGS

The Ryan White HIV/AIDS Program (RWHAP) Part F **AIDS Education and Training Center (AETC) Program** expands the capacity of the HIV **clinical** and **nonclinical** workforce.⁴

From **July 2022** through **June 2023**, regional AETCs

Conducted **766**
EHE-funded trainings

Reached **8,321**
HIV health care providers

¹ Estimated re-engaged clients are calculated only among EHE-funded outpatient ambulatory health services, medical case management, non-medical case management, and EHE initiative service category providers. This is likely an underestimate of all people re-engaged in care across all EHE-funded providers.

* Viral suppression is based on data for people with HIV who had at least one outpatient ambulatory health services visit and at least one viral load test during the measurement year and whose most recent viral load test result was less than 200 copies/mL.
