Medical care and treatment improve health outcomes and decrease the risk of HIV transmission. People with HIV who take HIV medication as prescribed and reach and maintain viral suppression cannot sexually transmit the virus to their partner. In 2020, 91.2 percent of Hispanic/Latino RWHAP clients receiving HIV medical care are virally suppressed,* which is higher than the national RWHAP average (89.4 percent).

*Viral suppression is defined as a viral load result of less than 200 copies/mL at most recent test, among people with HIV who had at least one outpatient ambulatory health services visit and one viral load test during the measurement year.
